**SUBJECT:** Yucca Mountain Repository fire response resources***SUMMARY***

Currently, DOE does not have any agreements with Nye County fire departments to provide fire protection services to the Yucca Mountain Project. There are some ongoing discussions about what Nye might provide, but as of now, there are no agreements.

With regard to the fire protection resources on the repository site, the Nevada Test Site provides fire protection services right now. The NTS has two active fire departments that operate 24 hours a day, seven days a week. One is in Mercury, Nevada (Area 23) at the base camp for the NTS and the other is in Area 6 on the NTS.

The Yucca Mountain Project site has two paramedics and a small medical facility and an ambulance for emergency response. The site also has two fully-trained underground rescue teams available at any time there is underground work underway.
